

HR Analytics Report

Executive Summary

This analysis was conducted on a workforce dataset containing 2,000 employees. The objective was to identify workforce trends, understand employee attrition, and provide actionable recommendations to improve employee retention.

Key Metrics

- Total Employees: 2,000
 - Overall Attrition Rate: 18.10%
 - Average Monthly Income: ₹82,457
 - Average Employee Age: 40.79 Years
-

Workforce Overview

Department Distribution

The workforce is distributed across seven departments:

- Research & Development
- Operations
- Marketing
- Finance
- Human Resources
- IT
- Sales

Research & Development and Operations represent a significant portion of the workforce.

Job Role Distribution

The organization employs professionals across multiple business functions, including:

- Data Analysts
- Finance Managers
- Research Scientists
- Software Engineers
- Sales Executives
- Recruiters
- HR Professionals

The workforce is well diversified across operational and technical roles.

Attrition Analysis

Overall Attrition

The organization has an attrition rate of 18.10%, indicating that approximately 18 out of every 100 employees leave the company.

Attrition Rate by Department

Department	Attrition Rate (%)
Research & Development	21.86
Operations	20.64
Marketing	20.00
Finance	19.57
Human Resources	15.96
IT	15.00
Sales	13.83

Insight

Research & Development experiences the highest attrition rate, suggesting potential issues related to workload, career progression, or employee satisfaction.

Sales and IT demonstrate comparatively stronger retention.

Attrition Rate by Job Role

Top Attrition Roles:

Job Role	Attrition Rate (%)
Data Analyst	31.34
Finance Manager	29.58
Logistics Executive	25.37
Brand Manager	23.08
Content Writer	22.50

Lowest Attrition Roles:

Job Role	Attrition Rate (%)
Recruiter	10.59
Sales Executive	12.12
Accountant	13.04

Insight

Data Analysts exhibit the highest attrition rate across all roles. This may indicate market demand, compensation concerns, or career advancement opportunities outside the organization.

Employee Experience Analysis

Work-Life Balance Impact

Work-Life Balance	Attrition Rate (%)
1	20.49
2	17.92
3	17.14
4	16.96

Insight

Employees reporting poor work-life balance are more likely to leave the organization.

Improved work-life balance correlates with reduced attrition.

Job Satisfaction Impact

Job Satisfaction	Attrition Rate (%)
1	17.80
2	19.21
3	17.71
4	17.75

Insight

Job satisfaction shows only a weak relationship with attrition. Attrition rates remain relatively stable across satisfaction levels.

This suggests that other factors may have a stronger impact on employee turnover.

Compensation Analysis

Income Quartile Analysis

Employees in lower income quartiles exhibit higher attrition compared to employees in higher income quartiles.

Insight

Compensation appears to be a significant factor influencing employee retention.

Retention initiatives should prioritize lower-income employee segments.

Business Recommendations

Recommendation 1

Conduct a detailed retention study within the Research & Development department to identify root causes of employee turnover.

Recommendation 2

Review compensation structures for Data Analysts and other high-attrition roles.

Recommendation 3

Introduce work-life balance initiatives, including flexible scheduling and workload management programs.

Recommendation 4

Develop targeted retention strategies for lower-income employee groups.

Recommendation 5

Implement quarterly attrition monitoring dashboards to proactively identify retention risks.

Conclusion

The analysis identified an overall attrition rate of 18.10%, with Research & Development and Data Analyst roles experiencing the highest employee turnover.

Work-life balance and compensation emerged as important drivers of attrition, while job satisfaction demonstrated a comparatively weaker relationship.

Addressing compensation concerns, improving work-life balance, and implementing targeted retention programs are expected to reduce future attrition and improve workforce stability.
